

CODEx MAGNUM

Phase 1 — UX / UI Design Blueprint

The application itself is the Codex.

A functional 2D foundation for the future personal knowledge library.

Source basis

Prepared from the provided Phase 1 UX/UI blueprint and the Codex Magnum project direction. This document preserves the supplied structure, terminology, and scope.

PHASE 1 PRINCIPLE

Function precedes form: establish the CRUD knowledge system first, then apply the Codex Magnum visual language, followed by lightweight 2D interaction polish.

1. Information Architecture

Library Hub	Central home; recently accessed books and category gateway
Categories / Shelves	Ideas · Knowledge · Projects · Learning · Journal · Bugs · Snippets
The Index	Universal search and filtering / quick access
Scrivener's Desk	Create and edit books
Book Reader	Read a selected book
Quick Capture	Capture an immediate thought without context switching
Settings	Configuration / back room

Primary navigation

Lib ary	→	Idea s	→	Kno wled ge	→	Proj ects	→	Lear ning	→	Jour nal	→	Bug s	→	Snip pets	→	Setti ngs
------------	---	-----------	---	-------------------	---	--------------	---	--------------	---	-------------	---	----------	---	--------------	---	--------------

2. Core User Flows

Entering the Library & Browsing

Create / Edit

Search / Delete

Quick Capture

3. Phase 1 Screen Blueprint

```

■ [≡] CODEX MAGNUM [Search] [+] ■

■ Ideas ■ ■
■ Knowledge ■ Recently Accessed ■
■ Projects ■ [BOOK] [BOOK] [BOOK] ■
■ Learning ■ ■
■ Journal ■ YOUR SHELVES ■
■ Bugs ■ Ideas (12) Knowledge (34) ■
■ Snippets ■ Projects (8) Bugs (5) ■
■ Settings ■ ■

```

■ ← Library TITLE OF BOOK [Edit] ■

■ Category: Knowledge Tags: React · Design ■

■ HEADING ■

■ Body content / rich text / code / images ■

■ Page 1 of 3 [→] ■

[illegible]

```
■ ← Library SCRIVENER'S DESK [Save] ■
■ Title: [ ] ■
■ Description:[ ] ■
■ Category: [Knowledge ▼] ■
■ Tags: [React] [Design] [+] ■
■ ■
■ CONTENT ■
■ ■ Rich text / pages / code / images ■ ■
■ ■ ■ ■
■ Links: [ ] ■
■ Status: Draft / Shelved ■
```

4. Book System & Component Architecture

Book data model

Metadata	Required title + short one-line description
Category	Single required shelf/category
Tags	Free-form multi-select keywords
Content	Ordered rich-text blocks/pages: headings, lists, code, images
Links	External links / GitHub repositories
State	Autosaving draft until explicitly shelved/published
Operations	Search, filter, CRUD

React-style hierarchy

```
CodexApp
  ■■■■ NavigationSidebar (collapsible)
  ■■■■ QuickAccessHUD (search + add)
  ■■■■ LibraryDashboard
  ■ ■■■■ ShelfGrid
  ■ ■■■■ BookSpineCard
  ■■■■ BookReader
  ■■■■ ScrivenersDesk
  ■■■■ IndexSearchModal
  ■■■■ QuickCaptureModal
```

5. Phase 1 Design System

Ancient Gold #D4AF37	Accents, headings, emblems
Obsidian Black	Structural dark surfaces
Dark Walnut	Library / structural background
Aged Leather Brown	Book surfaces
Deep Crimson	Category accent, e.g. Bugs
Emerald	Category accent, e.g. Learning
Vellum / parchment	Reading surfaces with high contrast

Typography

Headings: Cinzel. **Body / reading:** EB Garamond or Cormorant Garamond. Functional controls should remain highly readable.

Visual rule

Use subtle carved/engraved borders, gold hairlines, and restrained beveling rather than flat modern rectangles. The 2D interface should visually translate the physical-library metaphor without becoming a game HUD.

6. Responsive, Accessibility & Performance

- Desktop:** Full layout, collapsible sidebar, multi-column shelf grids, and potential two-page reader spread.
- Tablet:** Sidebar defaults collapsed; replace hover-only previews with tap interactions.
- Mobile:** Simplified 2D shelf grid / Reader Mode; single-column books and single-page scrolling reader.
- Accessibility:** Full Tab/Enter support; Esc closes overlays; keyboard shortcut for Index; sufficient text contrast; accessible labels for custom icons; semantic 2D grid for non-3D access.
- Performance:** Compress assets; lazy-load heavy content; virtualize very large shelf grids if necessary; keep CSS transitions lightweight and avoid expensive repaints.

7. Phase 1 → Future

Future-proofing: Keep the same book/page/tag data feeding the 2D ShelfGrid so later 3D book objects can consume the same database properties.

8. Build Order

01	Database & Backend	Books, Pages, Tags
02	Plain UI CRUD	Create / Read / Update / Delete
03	Quick-Access Search	Client-side search + filtering
04	2D Shelf Grid	Map records into category shelves
05	Visual Styling	Gold / Walnut / parchment / typography
06	2D Animations	Hover states + modal transitions

Phase 1 success criterion

A user can create a book, save it, find it through search or a shelf/category, open it, edit it, and delete it — while the interface already establishes the Codex Magnum library identity.

END OF PHASE 1 BLUEPRINT
